

NAVEEN BHARATHI B

SIH'23 | GUVI TNCPL FINALIST

I am a pre-final year student specializing in Full-stack development, with notable achievements, including being a finalist in the GUVI TNCPL Hackathon and the Smart India Hackathon 2023, where I worked on a Generative AI project.I have strong expertise in full-stack development, web development, and app development. I am actively seeking a full-stack development internship to leverage my skills, contribute meaningfully, and collaborate with others to solve real-world problems.

WORK EXPERIENCE

Web Developer Intern – Prasunet Company

(Remote) July 2024

- Built and maintained responsive web applications using Flask, incorporating HTML, CSS, and JavaScript to enhance functionality and user experience.
- Managed MySQL databases to ensure efficient data storage, retrieval, and seamless integration with backend systems for reliable application performance.

Flutter App Development Intern – Qoresys

(In – Office) March 2024

- Developed cross-platform mobile applications using Flutter, ensuring smooth performance, responsive design, and seamless user experiences across Android and iOS platforms.
- Integrated APIs and managed state efficiently to enhance application functionality, focusing on robust and scalable app architecture.

EDUCATION

Information Technology
Nadar Saraswathi College of Engineering and Technology, Theni,
Tamil Nadu, India. 2021 - 2025
CGPA – 8.16 (up to 5 th semester)

VOLUNTEERING

iSPIN – College Organization

Full Stack Developer

Oct, 2022 –Present

Managed a team and orchestrated various successful tech events, cultivating a vibrant tech community within the college. Directed the development of a CMS, LMS, Event Management Application, and the College Website, enhancing campus-wide communication and efficiency.

SKILLS

Front-End Development:

- HTML
- CSS
- JavaScript
- Bootstrap,Tailwindcss
- React

Back-End Development:

- PHP
- Django
- Flask
- Node.js | Express.js

Database Management:

- MySQL
- PostgreSQL
- MongoDB
- Firebase

API Development:

- REST API | Fast API

Tools:

- Git | GitHub
- Docker

MY WORKS

Hydro Power Plant Design

SIH Project - [Link](#)

- Designed AI models to improve turbine efficiency and energy output in hydroelectric plants, addressing the need for clean energy and enhancing the performance of run-of-river, reservoir, and pumped storage systems.
- Leveraged AI to assess environmental impacts, tackling challenges like habitat protection and resource sustainability, ensuring the implementation of eco-friendly and responsible energy solutions.

Language Learning Tool

Guvi TNCPL Hack Project - [Link](#)

- This project offers an engaging platform for learning languages, featuring interactive grammar lessons, alphabet practice, and vocabulary-building exercises.
- Users can interact with an AI-powered chatbot that provides personalized feedback and adapts the learning experience to individual progress, making the language journey both fun and effective.

Decentralized content moderation

Quantathon 2.0 Project - [Link](#)

- I worked on a project to improve how content is moderated on platforms. We used AI to automatically review and flag posts based on community rules, which made the process more efficient and consistent.
- To make it fair and transparent, we introduced decentralization, so no single party had control, and used blockchain to keep an open and unchangeable record of moderation actions. We also involved the community to let users vote and shape the moderation rules, ensuring the system aligned with their values.

Sustainable Living Guide Platform

Prasunethon Project - [Link](#)

- The platform helps people live more sustainably by offering personalized tips and connecting them with local resources and a supportive community.
- It features easy access to sustainability advice, local eco-friendly options, opportunities to engage in events and discussions, and a simple way for users to manage their preferences and track their progress.

Personalized Learning Platform

Smart Learning Pathway Project - [Link](#)

- The platform uses AI to create personalized learning paths based on each learner's skills and progress, offering tailored course recommendations and continuous tracking of their development.
- It also includes features like diagnostic reports, ability tests, interactive content, AI-powered doubt-solving, and community support to keep learners engaged and ensure they stay on track.

NextGen Blog Platform

Blog application - [Link](#)

- I worked on a mini blog application called NextGen, built with Flask, where users can create, update, view, and delete blog posts.
- The platform includes an admin dashboard for managing posts and a user authentication system for secure login and logout, allowing only authorized users (admins) to make changes.

ACHIEVEMENTS

SIH 23 Finalist

Finalist of Smart India Hackathon 2023 at Assam - Ministry of Power

Guvi TNCPL Finalist

Finalist Tamil Nadu Coders Premier League at Chennai - NM-AU-TNcpl

Quantathon 2.0 Finalist

Finalist Quantathon 2.0 at SRM ,Chennai

CERTIFICATIONS

Flask Course

infosys springboard

Completed Flask course, building web apps, managing routes, databases, authentication, and deployment.

Javascript Fundamentals

infosys springboard

Completed JavaScript Fundamentals (Intermediate) course, focusing on advanced concepts like asynchronous programming, closures, and DOM manipulation.

HOBBIES

Music and Drawing
